

t-SNE of user (★) and item embeddings — LATTICE item-graph propagation

Same recommender, same 10 sampled users, same 60 interacted items, same encoder— only the post-fusion item-graph propagation operator differs (openai_mit, seed 0). t-SNE fit jointly per panel on [user; item] embeddings.

Dense propagation (published)

test R@20 0.0437

GAT propagation (learned attention)

test R@20 0.0431
